

Scatter plot showing the relationship between TAC (x-axis, logarithmic scale) and an unlabeled y-axis. The plot displays two sets of data points:

- All Solutions (Blue dots):** A dense cloud of points covering the lower portion of the plot.
- Pareto Front (Red dots):** A set of points forming a curve that starts at low TAC and low y-value, rises sharply to high y-values at TAC around 10^5 , and then levels off, extending to TAC values up to 10^9 .
